

THE COMPANY

Livingston Steel Inc. (LSI) is an Island company owned by three brothers Carl, Paul and Scott who have approximately 50 years experience in welding, steel fabrication and erection.

Its facility at 21 Ottawa Street, Summerside, which is one of the most efficient of its kind, consists of a fully equipped 15,000 sq. ft. steel fabrication plant on over 6 acres of land.

The company undertakes structural steel fabrication and erection, miscellaneous metal fabrication, in house and mobile welding, fully equipped machine shop facility, 24 hour emergency welding, pressure vessel manufacture and carries a complete stock of plate, angles, flats, rounds, tubing and channels. It markets its products throughout the Maritimes and New England. No job is too big or too small.

We also provide services to other steel fabricators in the areas of wheelabrating services, painting, beam cambering, press brake, shearing and plate rolling.

## SERVICES

Business emphasis is the fabrication and erection of structural steel in Eastern Canada and New England, USA. The company is fully certified to undertake this work in both countries.

Our other products and services include structural design, pressure vessel design and manufacture, and working with clients to custom design and build innovative prototype machines.

We also provide many services to the region's structural and miscellaneous steel industry, such as blast cleaning, cambering, shearing and paint priming.

In the local market, we provide electric, MIG, TIG, and portable welding services. These services include 24 hour emergency welding, and we also carry a stock of structural steel, aluminum and stainless steel.

## FACILITIES

The major pieces of equipment within the Livingston Steel plant are the Pirana, a heavy metal shear, press brake, beam cambering machine, Wheelabrator, two long downdraft paint booths, and a fully equipped machine shop facility.

### PIRANA 140 TON IRON WORKER

A punch capacity of 140 tons, plate shear and angle shear

### HEAVY METAL SHEAR

A capacity of 10 feet long, 1/2" plate and up to 1" thick in shorter lengths

### PRESS BRAKE

A capacity of 250 tons 12 foot for 3/8

### BEAM CAMBERING MACHINE

Camber beams up to 40 feet long.

### WHEELBRATOR

104 foot roller in/out feed which can blast the rust from beams and prepare beams for painting.

### PAINT BOOTHS

Two 60 foot long downdraft paint booths using an airless paint spray system.

## THE CREW

The staff consists of manager Jason MacLssac, certified welders, shop supervisors, engineering technicians and project managers, many who have worked in the industry for many years.

For any of your welding or related needs call 902-724-2424 during business hours. After hours emergency please call 902-888-7517.
